

Schematic display of operations

Priva Office Direct allows you to display a schematic of all operations within your business. These process dashboards help you gain insight, whereby the business processes across the various departments in the greenhouse may be improved. The process dashboard is created by Priva entirely in line with your personal preferences and supplied by your dealer (on request).

Modifying overviews to suit your preferences

The newest version of Priva Office Direct allows you to specify the settings that you want to see. By toggling the settings that you deem important, you can easily modify existing screens. The screens only display the settings that are relevant to your specific business situation. This provides you with a transparent overview of settings that can affect the climate in your greenhouse. It also reduces the risk of settings errors.

Layout of information screens

Priva Office Direct 3.0 gives you the opportunity to easily design information screens yourself. You can specify the overviews that you want to see, for example a combination of heating and ventilation.

Priva Office Direct then places these into one overview screen automatically. This quickly provides you with a total overview from where you can easily navigate to underlying detailed settings.

Option to receive alarms by SMS or e-mail

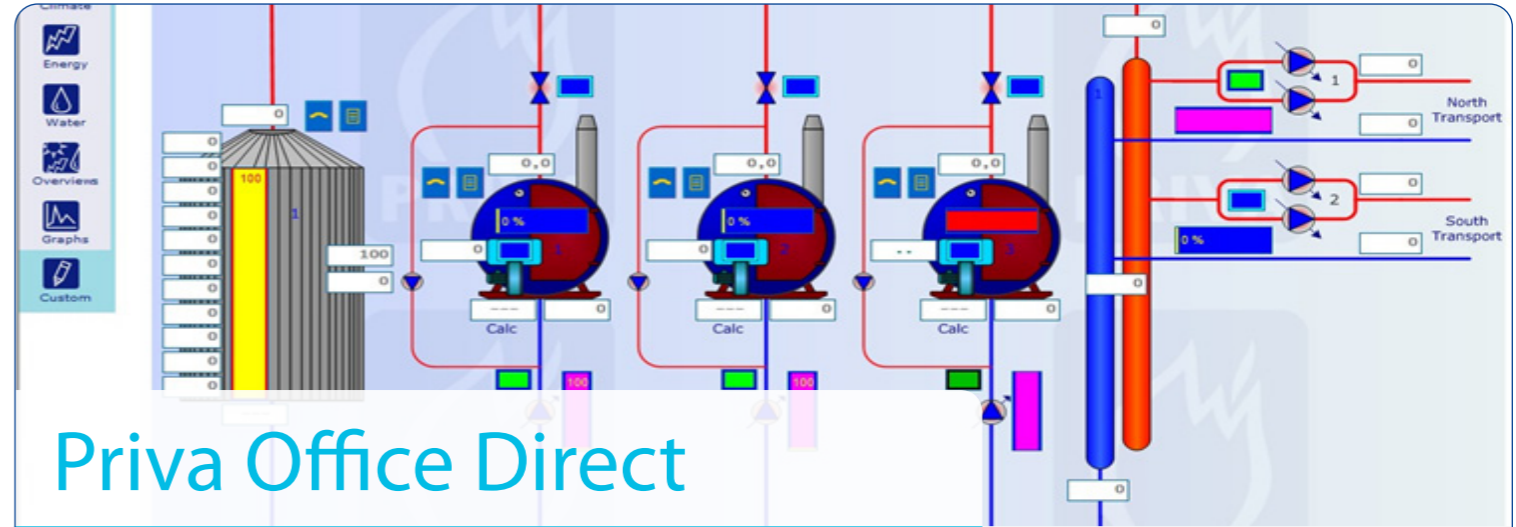

For effective handling of alarms in complex situations or large companies, Priva Office Direct is equipped with a link to an external alarm server. The alarm server is a separate software application which sends an alarm as an SMS, e-mail or voicemail message. In addition, this service can be linked to a duty rota so that only the on-duty employee receives the alarm. If the employee does not accept this message within a specified period of time, the alarm is automatically forwarded to the next person responsible on the contact list.

Access to the system via the Internet

Priva Office Direct is easily accessible via the internet. After inputting a password you can access the system from anywhere in the world.

Your Priva dealer:

Priva Office Direct

Your graphical user-interface for your process computer operations

Priva Office Direct is the user interface for the Priva process computer. The interface has a well-organized appearance and is more user-friendly thanks to the graphical interface screens. You will quickly understand how it works, see your actions directly on the screen and immediately benefit from more efficient operations management. Priva Office Direct: leading the way.

Your Priva process computer and Priva Office Direct: the ideal combination

Priva Office Direct allows you to get the best from your process computer. The extremely user-friendly interface gives you access to all of the solutions that the Priva Connex and Priva Intégro process computers offer for optimising growth and climate, making water and energy management more efficient and increasing profits. You can configure the program entirely to your personal preferences and business environment. Priva Office Direct also provides more options for monitoring and modifying processes. This allows alarm screens to appear in prominent positions when deviations are detected. In addition, you can add personal notes on what occurred and what solutions were used. These are then displayed if you experience a similar situation in the future.

Graphical and intuitive ease-of-use

Priva Office Direct has everything you expect from a modern software package. Clear icons ensure easy navigation to desired modules such as climate or water. Clear use of colour makes it immediately clear which module you are in. Particular to Priva Office Direct is the ease, for example, with which you can set the greenhouse temperature. Simply drag the points within a graph to the desired temperature pattern. The settings are then automatically adjusted for all desired ventilation and heating controls.
